

## Instructions on Running Ad-Aware SE Personal, a product from Lavasoft.

*Ad-aware SE Personal is free for individual use only. For profit business entities, governmental entities, or educational institutions, must purchase a valid end-user license in order to use the software. For better pro-active protection check out their Ad-Aware SE Plus. For a nominal fee you can have superior protection against Spy-ware and Ad-Ware*

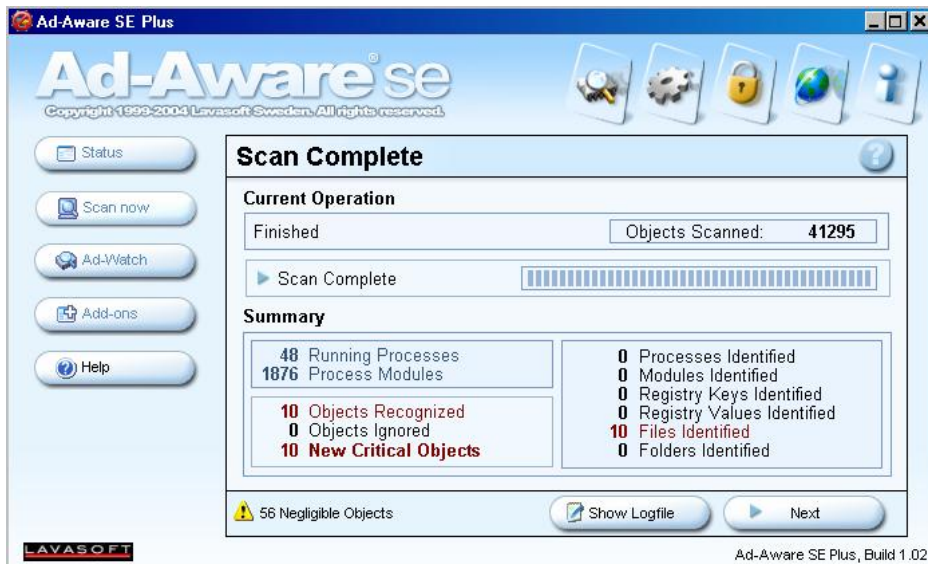

To Run Ad-Aware simply click on it's Icon on your desktop:

Then when the Ad-Aware main screen comes up:

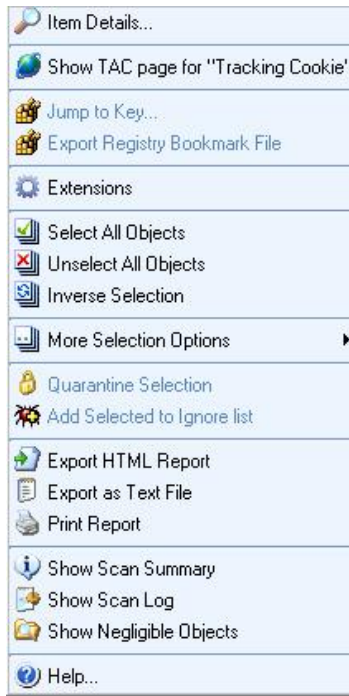

Make sure you **check for updates** prior to clicking on the start button. To check for updates simply click on those word on the screen "Check for updates now". Once the update process has completed (it will run you through few steps to update) then run the scan by clicking on the "Start" button and then on the next screen click on the "Next button and it will begin scanning. When it has completed scanning you will have the following screen (next page):

**BE AWARE** if your speakers are on you will hear a load wishing sound when it completes its scan. Click on the “Next” button and you will get this screen showing everything it found:

You need only be concerned with the items on the “Critical Objects” tab. If the boxes to the left of the listed items do not have a check mark in them, simply right click your mouse on a spot within that list and you will get this pop-up menu:

From this menu left click your mouse on the "Select all objects" option, and then you will see all the items in the list have a check mark to the left of them. You may now click on the "Next" button.

Don't let the following message scare you, it will look like this"

Simply click on the "OK" button and it will first quarantine the changes (in the event one of the items needs to be restored) and then delete the items. Once this process has finished it will return you to the main Ad-Aware start screen.

This should be done at a minimum of once a month or, optimally, once a week. Doing so will drastically improve your Internet and computing experience.
